HG graffiti remover

- free from volatile solvents
- biodegradable

HG graffiti remover is ideally suited for the safe removal of spray can paint, fresh paint splashes, felt tip and pen marking on vulnerable surfaces such as lacquer, paint and plastic. *HG graffiti remover* can also be used on shiny surfaces such as glass, metal, plexi-glass, marble, granite, eternite etc, but also on stone, concrete and untreated wood. *HG graffiti remover* has a mild fragrance and is free from volatile solvents.

Directions for use: First apply *HG graffiti remover* on a small area to test that the subsurface is not affected. Do not apply on freshly painted surfaces. Apply *HG graffiti remover* with a natural bristle brush (not nylon bristle) or a clean cloth onto the graffiti, paint or felt tip pen to be removed.

On delicate subsurfaces:

Remove the dissolved graffiti, paint or felt tip pen immediately with a clean cloth. Repeat the treatment if necessary. Do not leave for more than two minutes due to possible dulling of the subsurface. After treatment rinse off the surface with hot water.

On non delicate subsurfaces:

The length of time necessary for the product to work depends on sub-surface and age of the graffiti. Old graffiti, paint or felt tip pen marks on highly porous sub-surfaces such as concrete and stone can be difficult or even impossible to remove. The gel format gives a long working time and can be left to work even up to 24 hours. Always apply with a brush on rough surfaces. Remove the dissolved graffiti, paint or felt tip pen with a clean cloth or rinse off with hot water, if necessary under high pressure. Repeat the procedure if the graffiti, paint or felt tip pen has not been completely

removed after the first treatment. Clean tools after use with water.

Attention: Transport and store the jar upright. Store in a cool place, free from frost and in well-closed packaging.
